

Global RESPOND

EMTEL Commercial FM Emergency
Notification Broadcast System

Contact Millions
of FM Radios in
Critical Minutes

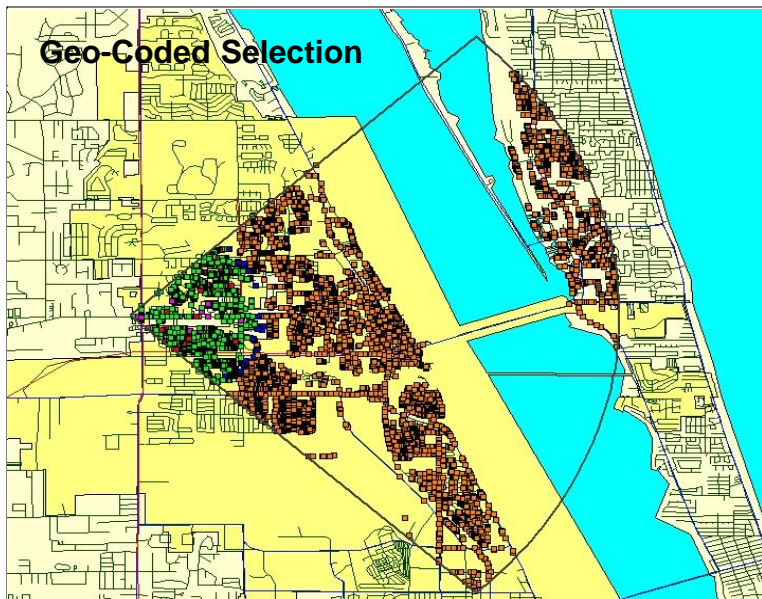

EMTEL **RESPOND™ Radio**

Storm photos courtesy of the National Weather Service and USGS

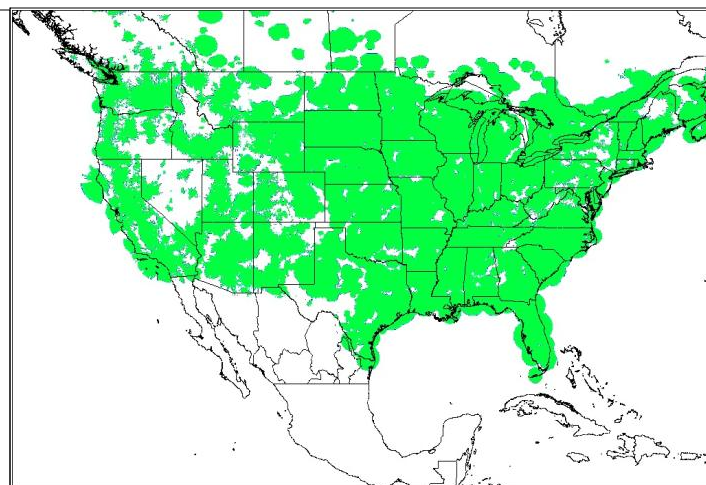

- Receives RESPOND™ messages broadcast over EMTEL subcarrier network
- Individually programmable to identify radio location and demographic categories such as first responder, school building, senior citizen, etc...
- Can receive encrypted custom text messages over FM subcarrier.
- Listens day and night
- Alerts automatically

Global RESPOND®

The Global RESPOND® FM communication network will utilize an “in place” group of commercial FM stations to provide blanket coverage to 96% of the United States real estate lacking service only to the Nevada testing grounds. Millions of responders and residents will be targeted for “wake-up” alerts utilizing the EMTEL FM coding system that can target nine sectors per county and send proprietary messages to one or thousands of responders and an unlimited number of residents. The radios will alert, play music and display an emergency message that scrolls across the screen. All radios have NOAA Weather bands and the EMTEL emergency band along with standard FM/AM channels, wake alarm, and battery/AC power. **When the US experiences the next power outage, the EMTEL Global FM Network will continue to communicate through the emergency.**
